

14th BIENNALE
OF EUROPEAN TOWNS
AND TOWN PLANNERS
NAPOLI

SPECIAL WORKSHOP 2 | ENHANCING URBAN REGENERATION AND SPATIAL JUSTICE WITH NATURE-BASED SOLUTION
MAPPING SUSCEPTIBILITY TO CLIMATE CHANGE EFFECTS AND TO SPATIAL INEQUALITY FOR NBS PLANNING AND DESIGN

MARIALUCE STANGANELLI, CARLO GERUNDO

DEPARTMENT OF ARCHITECTURE, UNIVERSITY OF NAPLES FEDERICO II

STANGANE@UNINA.IT; CARLO.GERUNDO@UNINA.IT

Naples, 22ND April 2024

WHERE DO WE NEED (MORE) NATURE WITHIN CITIES?

can we shift the way we deal with NBS from the solely design approach to an organic planning one?

SYNTHETIC INDEXES METHOD

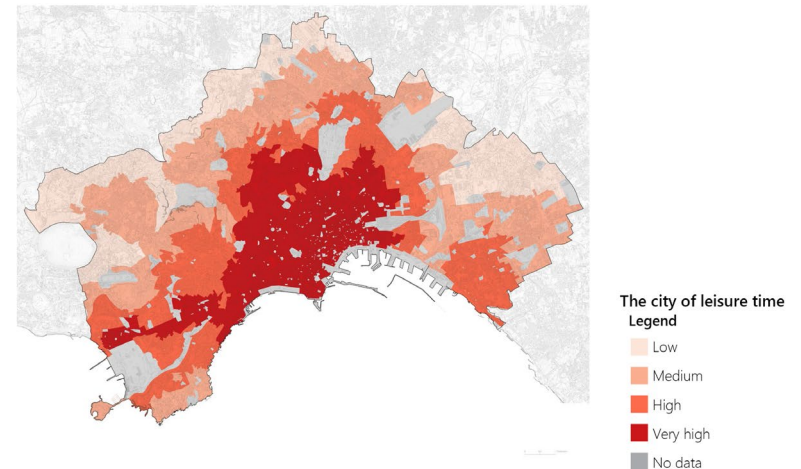

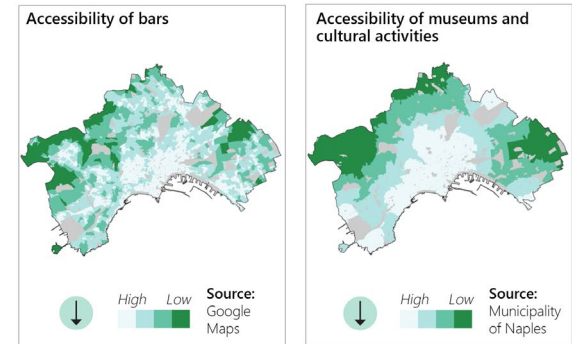

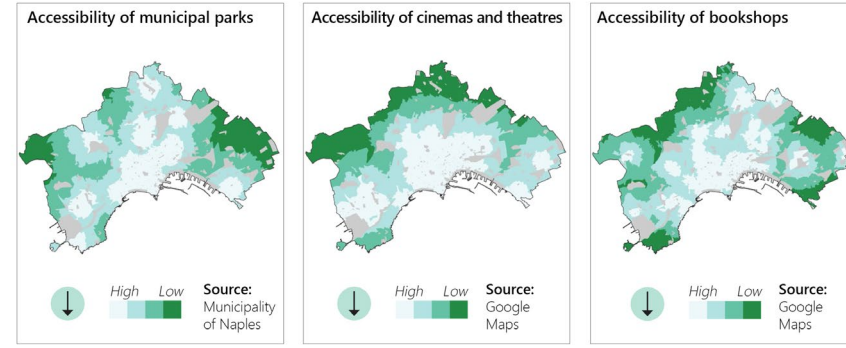

| Indicatore | Valore | Indicatore | Valore | Indicatore | Valore |
|------------|--------|------------|--------|------------|--------|
| 1 | 0.12 | 11 | 0.45 | 21 | 0.78 |
| 2 | 0.34 | 12 | 0.56 | 22 | 0.89 |
| 3 | 0.21 | 13 | 0.67 | 23 | 0.90 |
| 4 | 0.45 | 14 | 0.78 | 24 | 0.91 |
| 5 | 0.56 | 15 | 0.89 | 25 | 0.92 |
| 6 | 0.67 | 16 | 0.90 | 26 | 0.93 |
| 7 | 0.78 | 17 | 0.91 | 27 | 0.94 |
| 8 | 0.89 | 18 | 0.92 | 28 | 0.95 |
| 9 | 0.90 | 19 | 0.93 | 29 | 0.96 |
| 10 | 0.91 | 20 | 0.94 | 30 | 0.97 |

Metodo degli indici relativi

$$IR = \frac{\sum T_i}{n} \leftarrow \text{0-1}$$

Valore dei sub-indicatori standardizzati

(Gerundo & Stanganelli, 2023)

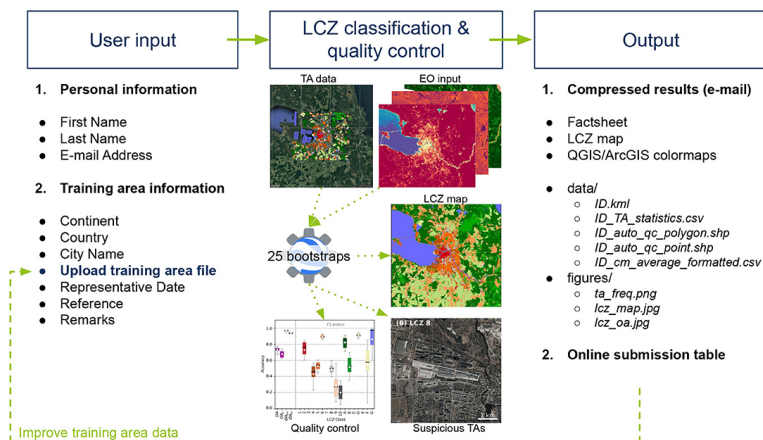

CLIMATE CHANGE EFFECTS SUSCEPTIBILITY MODELS (UHI)

LOCAL CLIMATE ZONES

RASTER BASED MODELS

WUDAPT protocol

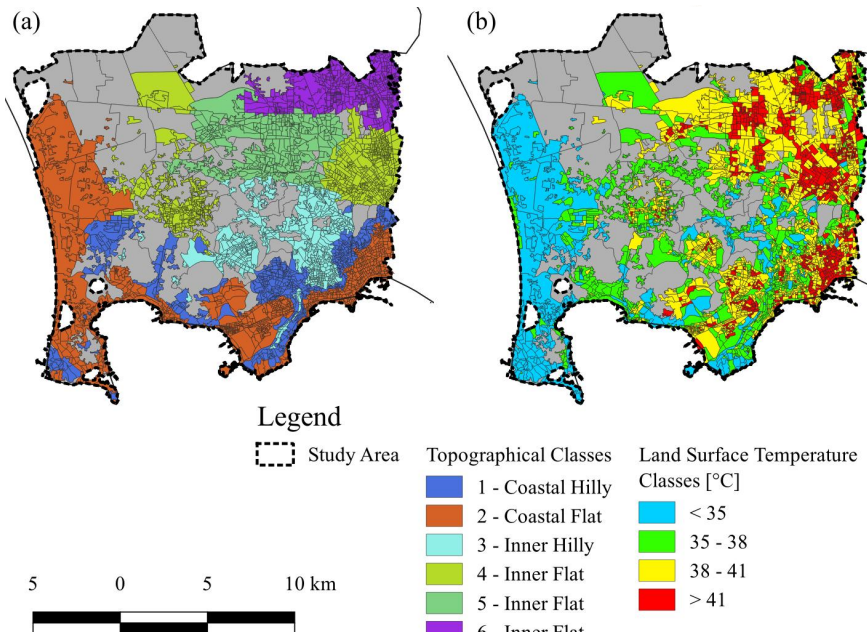

(Demuzere et al., 2021)

CONS

- Low spatial resolution output
- Difficult interpretation at the small scale
- Effects of third dimension on urban microclimate are not considered

A VECTOR BASED APPROACH

SVF | Green Surface | Building Height | Building Ratio

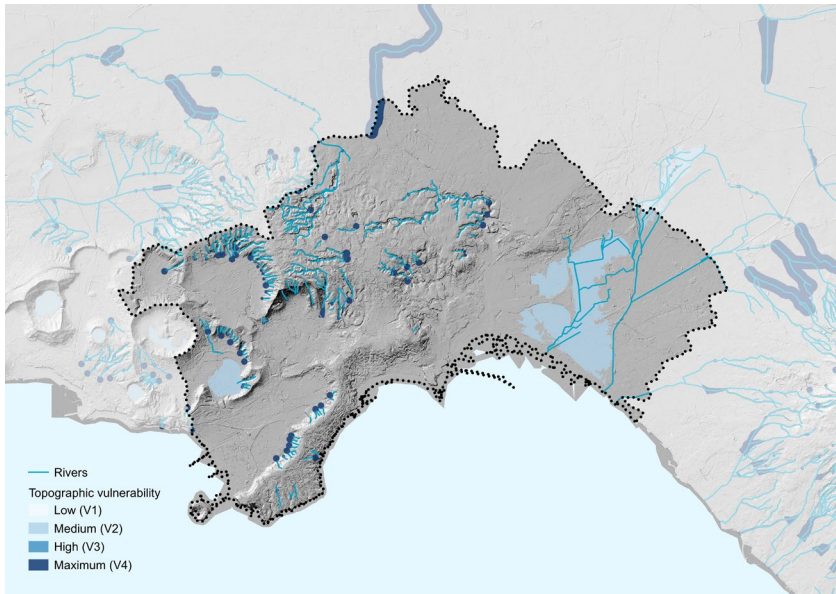

| LST Class | Morphology Class | | | | | | | | | | | |
|------------------|------------------|------|------|-------|------|------|-------|------|------|-------|------|------|
| | Coastal | | | | | | Inner | | | | | |
| | Flat | | | Hilly | | | Flat | | | Hilly | | |
| | min | med | max | min | med | max | min | med | max | min | med | max |
| Very High | 0,29 | 0,55 | 0,95 | 0,34 | 0,56 | 0,83 | 0,37 | 0,59 | 0,91 | 0,44 | 0,58 | 0,79 |
| High | 0,28 | 0,57 | 0,87 | 0,37 | 0,58 | 0,81 | 0,36 | 0,64 | 0,91 | 0,39 | 0,57 | 0,78 |
| Medium | 0,29 | 0,64 | 0,88 | 0,42 | 0,61 | 0,88 | 0,47 | 0,68 | 0,88 | 0,37 | 0,58 | 0,77 |
| Low | 0,54 | 0,68 | 0,87 | 0,47 | 0,64 | 0,76 | 0,52 | 0,65 | 0,80 | 0,42 | 0,63 | 0,83 |

(Gerundo & Stanganelli, 2024)

CLIMATE CHANGE EFFECTS SUSCEPTIBILITY MODELS (FLOODING)

FLOODING PRONE AREAS

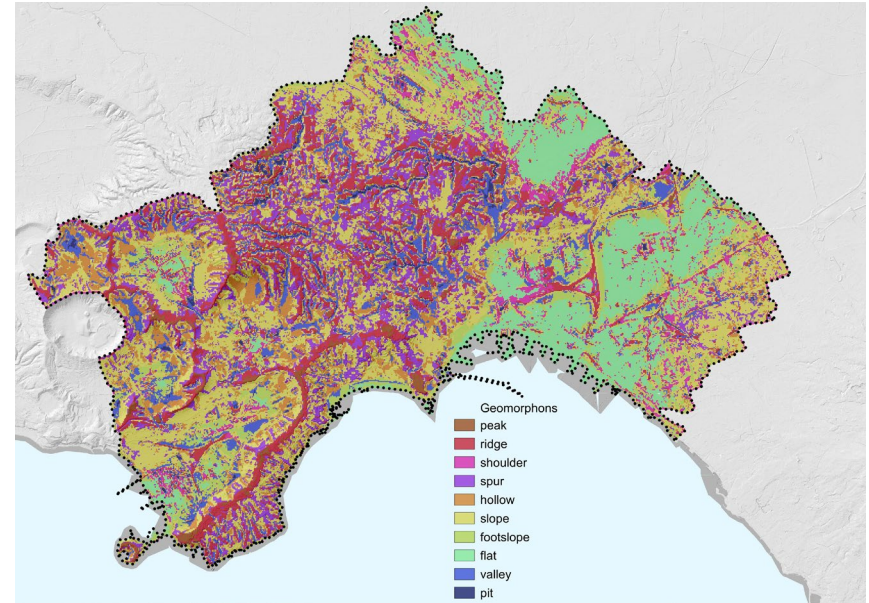

MAX FLOW DEPTH

Susceptibility to be flooded can be assessed as a function of the maximum flow depth that can occur during a flooding event with a given return period.

GEOMORPHONS

(Jasiewicz & Stepinski, 2012)

FUTURE STEPS AND CONCLUSIVE REMARKS

- Implement morphology issues into LCZ assessment;
- Aggregation and weighting procedures (SMCDA);
- Urban planning constraints and limitations;
- Replicability and scalability of the methodology;
- Machine learning and AI?
